

The contracting team your hospital never had. **Now it does.**

CORE — commercial intelligence for Australian private & day hospitals · by Counterpart Health

Profit margin — the two sides of the table

Hospitals: sector profit margin, Private Hospital Sector Financial Health Check (2024).

*Insurers: insurance service result + insurance revenue, APRA quarterly statistics, December 2025.

What "standard terms" leak — Bayview (synthetic)

Synthetic worked example — fictional 4-theatre day hospital: \$14.2m revenue, \$690k EBITDA. Clause mechanics modelled on common real HPPA terms.

THE PROBLEM IS STRUCTURAL

- Sector profit margins fell from **5.1% to -0.1%** (2020-21 → 2023-24, Government Health Check) while insurers hold ~5% margins and \$13bn net assets (APRA, Dec 2025).
- The top five funds hold ~80% of policies; a day hospital CEO negotiates alone, without benchmarks, against a national contracting team.
- "Standard terms" quietly leak 5-8% a year — discretionary indexation, unilateral re-banding, frozen holdovers, 24-month clawbacks.

WHAT CORE DOES ABOUT IT

- **Reads your contract like opposing counsel:** every clause classified, unfair terms flagged with reasons, and **valued in dollars** — with a human override and audit trail.
- **Builds your leverage case:** fund dossiers, mutual-dependency modelling, and a fully decomposed Negotiation Leverage Index.
- **Runs the negotiation with you:** strategy options, drafted letters, fund-reply trap detection, board-ready close-out. Nothing is ever sent without you.
- **Defends the audit season:** fund file in → PAS-enriched workbench → Excel response out, with outcome dashboards.
